Logitek JetStream Now Compatible with Ross OverDrive

Interface provides seamless operation, manual control of audio for breaking news.

February 13, 2011

For Immediate Release

Houston, Texas -- Logitek Electronic Systems' JetStream Networked Audio platform has achieved compatibility with the Ross OverDrive Production Automation Controller and has been added to the Ross Video Interface list.

The interface allows users to connect Logitek networked audio consoles to the Ross OverDrive platform for seamless operation. When connected together, OverDrive can control any Logitek audio console through the JetStream Networked Audio System. It also allows the station to take manual control of audio for breaking news. Logitek offers many consoles for TV broadcast applications including a virtual console for those who have no space for a physical audio mixer.

The Ross Overdrive is a highly flexible production control system that enables touch screen control over the devices used in a production environment. OverDrive technology enables even the most sophisticated productions to be executed more cleanly and consistently, while delivering substantial savings in operational costs.

About Ross Video
